LLU broadband

Cost effective and fast broadband

LLU broadband

LLU broadband from Frontier Voice and Data is a broadband service that provides a cost effective alternative to traditional ADSL services.

LLU (Local Loop Unbundled) is the final step in the deregulation of the telecoms market and enables communications providers to 'unplug' users from BT (i.e. unbundle) to carry traffic over their own network.

This facilitates the delivery of fast, cost effective and efficient broadband.

Alongside our suite of ADSL, ADSL2+ and SDSL broadband services, Frontier Voice and Data provides LLU broadband with a range of speed and usage levels to suit the needs of your organisation.

Customers can also select LLU to carry voice traffic only making LLU a genuine alternative to using traditional ADSL providers.

We offer speeds from 8Mb to 24Mb and customers can choose to prioritise their traffic at busy periods with our Premium services.

It's simple to switch to LLU broadband and contact us today to find out more.

Key benefits

- Real market choice as an alternative to ADSL providers
- A lower cost alternative
- Download speeds from 8Mb/s to 24Mb/s
- Upstream speeds of up to 1Mb/s
- The option to consolidate your services to carry both voice and data
- Business grade LLU network
- Reliability with the UK's largest Next Generation IP Network
- Easy to manage services
- Often lower equivalent contention ratios
- Optional prioritisation of traffic during busy periods.

Key service features

For further details on our LLU broadband services and the range of standard and advanced features available please contact our Sales Team.

Basic voice and broadband service	The 'entry level' service provides up to 8Mb downstream and 1024kb upstream as standard with a 5Gb upload/download quota.
Download speeds	Our LLU services offer downstream speeds from 8Mb/s to 24Mb/s.
Fair usage and download quotas	We provide download quotas from 5Gb to 40Gb depending on the service chosen. Many providers will state that they offer unlimited downloads however this is rarely the case due to Fair Usage Policies. At Frontier Voice and Data we prefer to be more transparent.
Voice traffic	Customers can choose LLU for voice traffic only and have the ability to consolidate their voice and data traffic by using LLU. The voice only option includes a basic 157k service and therefore can be suitable for use with IP telephony for a SOHO or small business.
Wireless router	The default router is a Thomson TG585v7 ADSL2+ 802.11g wireless router. This is a chargeable item.
Premium services	These enable customers to have their traffic prioritised during busy periods for the network, for example from 3pm after schools close for the day.
