Online Backup Service

Secure and reliable web-based data backup

Online Data Backup

Online Backup is a service that delivers easy to use, secure and reliable backup of important files over the Internet.

The service is delivered via an Online Backup software client that can be installed on a PC, laptop or server running Windows, MAC OS or Linux.

The competitively priced service is built on top of an award winning SANServe hosting platform and backed by Frontier Voice and Data's customer service and support.

The online backup application is built on a fully redundant cloud services platform and uses VMware vSphere and the latest blade server, storage and network technologies. The data is replicated to a secondary data centre.

Two services are available, one to support desktop or laptop backup and the other also adds server backup.

Key benefits

- Fully resilient platform for a reliable service
- Files securely stored off site
- Backed up files can be accessed instantly and securely via the Internet
- Backup schedules can be automatically set hourly, daily, weekly or monthly
- Individual files can be selected for backup
- Multiple versions of files can be backed up
- No need for expensive hardware
- Automatic reporting

To find out more about how to reliably secure your data online contact our Sales Team now.
